Let denote by $S(\phi)$ the extremal operator defined by the compression of the unilateral shift $S$ to the model subspace $H(\phi) = \mathbb{H}^2 \ominus \phi \mathbb{H}^2$ as the following $S(\phi)f(z) = P(\phi f(z))$, where $P$ denotes the orthogonal projection from the Hardy space $\mathbb{H}^2$ onto $H(\phi)$ and $\phi$ is an inner function on the unit disc. The numerical radius seems to be important and have many applications in harmonic analysis like the following theorem which gives an extension of a previous result of C. Badea and G. Cassier [1].

**Theorem 0.1 ([7] Theorem 2.1).** Let $F = P/Q$ be a rational function which is positive on the torus, where $P$ and $Q$ are coprime. Denote by

$$\phi(z) = \prod_{j=1}^{p} \left( \frac{z - \alpha_j}{1 - \overline{\alpha_j} z} \right)^{m_j}$$

and

$$\psi(z) = \prod_{j=1}^{q} \left( \frac{z - \beta_j}{1 - \overline{\beta_j} z} \right)^{d_j}$$

the respectively finite Blashke products formed by the nonzero roots of $P$ and $Q$ in the open disc, let $m = \sum_{j=1}^{p} m_j$ and $d = \sum_{j=1}^{q} d_j$. Then the Taylor coefficient $c_k$ of order $k$ of $F$ satisfies the following inequality:

$$|c_k| \leq c_0 \omega_2^2(S^k(\phi)),$$

where $\varphi(z) = z^{\max(0,m-d+1)} \psi(z)$.

In this talk, we give an explicit formula of the numerical radius of $S(\phi)$ in the particular case where $\phi$ is a finite Blaschke product with unique zero and an estimate on the general case. We establish also a sharpened Schwarz-Pick operatorial inequality generalizing a U. Haagerup and P. de la Harpe result for nilpotent operators [6].

The second part is devoted to the study of the higher rank-$k$ numerical range denoted by $\Lambda_k(T)$ which is the set of all complex number $\lambda$ satisfying $PTP = \lambda P$ for some rank-$k$ orthogonal projection $P$. This notion was introduced by M.-D. Choi, D. W. Kribs, and K. Zyczkowski motivated by a problem in Physics. We show that if $S_n$ is the $n$-dimensional shift then its rank-$k$ numerical range is the circular disc centered in zero and with a precise radius.
